

MICROSOFT[®] DYNAMICS - NAV - MANUFACTURING II

Introduction

This 3 day course explores the Microsoft Business Solutions – Navision Manufacturing area from an implementer point of view. Chapters in this hands-on classroom experience include topics such as production planning, subcontracting, and capacities. This should enable users to understand what is being produced, what needs to be produced and what needs to be purchased or produced and when. All materials used in the Microsoft Navision course are based on Microsoft Navision 4.00 product.

Audience

This course is intended for Microsoft Business Solutions Partner professionals who are responsible for the setup and training of manufacturing companies and the employees. It is strongly recommended that students have a strong background in Microsoft Navision financials, a working knowledge of manufacturing terms and processes, and are comfortable with Microsoft Navision inventory. The typical audience for this manual is consultants who are responsible for the set up and training of clients using Microsoft Navision Manufacturing.

At Course Completion

After completing this course, students should understand:

- Sales Order Interface & Order Planning
- Forecast & MPS
- Planning
- Additional Planning Topics
- Subcontracting Capacity
- Shop Loading
- Additional Manufacturing Topics

Prerequisites

Before attending this course, students must have:

- A strong understanding of manufacturing terminology and processes
- The ability to use Microsoft Navision for financials processing
- Completion of Microsoft Business Solutions – Manufacturing I

In addition, it is recommended, but not required, that students have completed:

- Inventory Control in Microsoft Navision
